Feed enhancement for aquaculture

A functional supplement applied to your existing feed.

Deployed on farms in Singapore and India

5-10×
return on additive investment
in farm deployments

25%
additional growth
Asian seabass, Singapore

>25%
additional growth
Indian major carp, India

Three-month SAT Asian seabass trial

Measure	Control	ProBio	Improvement
Feed conversion ratio	2.2	**1.7**	**22.7% lower FCR**
Unfit / dead fish removed	272	**81**	**70.2% fewer removals**

One tank per treatment; approximately 10,000 fish per tank. Removals include unfit fish and deaths.

Better appearance and taste

Asian seabass (barramundi)

Taste: 9.7/10 vs 6.7 control
Appearance: 10.0/10 vs 7.0 control

Indian major carp

Taste: 9.2/10 vs 6.8 control

Control above; ProBio-enhanced feed below. SAT blind panel: 10 evaluators, five fish per tank. Carp scores: company field evaluation.

Applied to the feed you already use

1. Prepare the concentrate
Dilute according to the agreed application guidelines.

2. Coat existing feed
Manual or spray coating suited to your operation.

3. Continue normal feeding
Retain your base feed and farming infrastructure.

Formulation, key ingredients and application support for fish, shrimp and pet nutrition.

Fish results shown above; other applications receive their own evaluation.

See it before you believe it.

1-month pilot at no cost. We supply the additive and application guidance.
